

Maurice Leonard Okurut

Software Engineer · Full-stack web & data

Kampala, Uganda (UTC+3) · +256 742 392 606 · okurutmauriceleonard@gmail.com

maurice-dev.com · github.com/Mo-reece · linkedin.com/in/maurice-leonard-okurut-26a048356

PROFILE

Computer Science graduate and software engineer who builds and runs production web applications on React, TypeScript and PostgreSQL, backed by day-to-day data engineering work in Python and SQL. Built and deployed a live e-commerce storefront end to end, and contributed to live client sites for a Ugandan bookstore chain and a hospitality business. Open to software engineering roles, on-site or remote, and to contract work.

TECHNICAL SKILLS

Software & web	TypeScript, JavaScript, React, Next.js, Vite, Node.js, Python, HTML, CSS, REST APIs, authentication
Data & databases	PostgreSQL / Supabase (row-level security), SQL, MySQL, SQLite, pandas, NumPy, scikit-learn, Power BI
Engineering	Git / GitHub, GitHub Actions CI, Vercel, testing and debugging, Linux CLI, nginx, technical documentation

EXPERIENCE

Data Engineer · Logos Cloud Services (Logos Cloud Edge Ltd), Kampala 2026 – present

- Develop Python workflows that collect, clean, validate and organise client data, with automated checks for missing fields, duplicates and inconsistent records.
- Build and maintain SQL databases and reporting workflows for client-facing applications, dashboards and recurring operational reports.
- Support API-based integrations and automation; document workflows and use Git/GitHub to keep work reproducible.

IT Intern · Ngora District Local Government, Uganda Aug – Oct 2025

- Troubleshoot system and network connectivity across more than five departmental offices and documented recurring issues.
- Verified financial transaction data in IFMS, digitised official records, and checked them for missing, duplicate and inconsistent entries.
- Prepared technical activity reports and system-access procedures for district staff.

Data Science Intern (remote) · Redynox 2025

- Completed mentored Python projects in REST API data handling, processing and workflow automation under remote technical review.

SELECTED PROJECTS

Vault Tech storefront · React, TypeScript, Supabase, Vercel vaulttechgadgets.com

- Built and deployed end to end a live storefront for a Kampala electronics shop: 100+ products on Supabase Postgres, enquiry-led buying instead of checkout.
- Designed row-level security plus an admin allowlist so only approved accounts can write, and a built-in catalogue the site falls back to if the database is unreachable.
- Built an admin panel the non-technical owner uses to manage stock, with in-browser WebP image compression and uploads to Supabase Storage.

Aristoc Booklex online storefront · React, REST APIs, authentication aristocbooklex.com

- Collaborated across the full stack on a live bookstore platform: catalogue and search, accounts, wishlist, cart and checkout against a token-secured API.

The Streamside Park · React, Vite, nginx streamsideparkug.com

- Collaborated on a live resort site with a date-and-guest availability search and WhatsApp enquiries.

Data Quality Assessment Tool · Python, pandas, GitHub Actions

github.com/Mo-reece

- Configurable checks for missing values, duplicates, types, outliers, ranges and referential integrity, with console and HTML reports, regression tests and CI.

ChajiBoda electric rider app · JavaScript, Gemma, Google AI Studio

Hackathon

- Built for a Kampala hackathon: trip-range estimates, swap-station finder, earnings tracking, and an English and Luganda chat assistant.

Customer Churn Prediction · Python, scikit-learn, XGBoost

github.com/Mo-reece

- Telecom churn classification with feature engineering, model evaluation and explainability notes.

EDUCATION & CERTIFICATION

BSc Computer Science · ISBAT University, Kampala

Awarded 2026

Software engineering, databases, data structures and algorithms, computer networks, cybersecurity, web technology.

IBM Data Science Professional Certificate · Coursera / IBM Skills Network

Nov 2025
